

Featured Entities

Allows you to feature select items from your ISM for specified periods of time. You can select items from the roster, staff manager, multimedia, store, and auction. Before setting up an individual item, you will need to create a category for it.

Categories Tab

Creating a new category

1. Click on New.
2. Enter the name of the category; ideally this should be named whatever the name of the section is on their website (i.e. Player Spotlight or Featured Merchandise).
3. Select the type. This determines where the ISM will get the information from. For example, if it's set up as Roster, it will only pull from the players on the roster.
4. Save.

View Entities Tab

Creating a new Featured Entity

1. Click on New.
2. Select the category from the drop-down. Once you do this, more fields of information will appear below.
3. Select the item that you want to feature from the drop-down.
4. Enter the item name. This is kind of like a headline.
5. Enter the Start/End Dates or else select Yes on Ignore Start/End Dates.
6. Photo – if you load a photo here, it will override whatever photo has been loaded in the ISM for that particular item.
7. Enter a description. Keep in mind this is what will display on the homepage, so it is more like a caption. You don't want to write a novel here. Check the site and format the text accordingly.
